Description – The candidate will help create the conceptual and logical data models and the translation of the logical model into a physical model. The Data Warehouse environment consists of several disparate source systems to be consolidated into a robust high performing, quality rich, and scalable data foundation. In addition to a strong Enterprise Data Warehouse background, the ideal candidate must possess experience in the successful implementation of an enterprise BI solution that utilizes **Oracle Business Intelligence Enterprise Edition (OBIEE)**.

Responsibilities include interaction with technical developers and key business users to design and develop Oracle Business Intelligence metadata, dashboards, and reports along with installing and supporting the server Infrastructure to support business intelligence initiatives

Primary Responsibilities:

- Self-starter, highly motivated team player
- Willing to play a key role on an integrated team
- Lead team of developers. Oversee coding assignments.
- Develop business application software using industry defined coding standards that satisfies customer requirements.
- Participate in peer design and code reviews as required
- Design, Develop and Support Business Intelligence initiatives across the enterprise
- Experience working with database technologies, primarily Oracle
- Advanced data modelling and database development skills
- Developing and maintaining ETL scripts to stage data for data analysis and reporting
- Extensive experience in **Oracle Business Intelligence Enterprise Edition (OBIEE) is REQUIRED**
- Designing OBIEE subject area metadata to support business reporting and analysis
- Design and implement Oracle OLAP (cubes) for use with Oracle Business Intelligence dashboards
- Analyzing complex data systems and document data elements, flow, relationships and dependencies in order to contribute to conceptual, logical and physical data models
- Database tuning and monitoring performance monitoring and tuning
- Implementing SQL best practices in database coding and design
- Assist in the definition and implementation of data organization hierarchies and structures (e.g., ODS, EDW, Data Marts)
- Experience and ability to create, review and present Source Systems Analysis and source to target mappings across Staging, Integration and Presentation layers
- Experience and ability to identify and document data integration issues; including challenges such as duplicate data, non-conformed data, and unclean data

Qualifications:

- Minimum B.S. Computer Science or related discipline from accredited college or university
- 8+ years of high level knowledge in relational databases (Oracle)- design, development, architecture
- 8+ years of extensive experience writing SQL scripts, PLSQL and MSSQL stored procedures, functions, triggers and user defined functions

4601 N. Fairfax Drive, Suite 1200, Arlington, VA 22203
